Title

Absorption of heat by furnace waterwalls and by experimental

two-side heated water tubes

Periodical: Elek sta 5, 4-7, My 1955

Abstract

: The article discusses research made at a heat and electric power plant on a three-drum boiler unit (150 t/hr capacity, 34 atm pressure, 425° C steam temperature, 150° C feed-water temperature and 300° C air temperature) with a heating surface of 2,500 sq m. A table gives data of heat-absorbing waterwalls. A detailed description of the experimental installation consisting of two water tubes experimental installation consisting of two water tubes follows. One tube is placed in the center of the furnace and the other near the side wall. The effects of radiant heat on these tubes are discussed. The tests and mathematical calculations are described in great detail and illustrated with several diagrams showing devices used.

The characteristics, reserves and consumption of fuels produced in India (Kharakteristika dobyvayemykh v Indii topliv, ikh zapasy

i potrebleniye.)

PERIODICAL'S

Teploenergetika, 1958, No.7. pp. 85-86 (USSR)

ABSTRACT:

The article opens with a brief historical survey of coal mining in India. Figures are given for 1956 production. The productivity of labour is very low because mechanisation is slight. The main properties of coals from a number of fields are described, and the leading properties of some are tabulated. The properties of Indian crude oil are given; it is of normal viscosity, low ash but high sulphur content. Prospective increases in coal and oil production are considered. There is 1 figure: 1 table and 4 literature references (1 Soviet and 3 English)

TITLE: Power Engineering in India (Energetika Indii) PERIODICAL: Teploenergetika, 1959, Nr 2, pp 89-91 (USSR)

ABSTRACT:

The article opens with a brief review of power engineering developments in India since 1946; curves of installed capacity and power generated in different years being given in Fig 1. Brief descriptions are then given of the power stations at Bokaro, constructed in 1953 and Trombey. There are 3 figures.

Climatic Seasons in the USSR (Klimaticheskiye sezony SSSR)

PERIODICAL:

Trudy Glavnoy geofizicheskoy observatorii, 1956, Nr 62, pp. 67-84 (USSR)

ABSTRACT:

The authors survey the possibilities of subdividing the year into more natural seasons than those estabthey ear into more natural seasons than they reject lished by the calendar. At the same time they reject the theory that in the south there are only two seasons (warm and cold) or just one in the polar regions. The authors examine the monthly averages of temperature,

Climatic Seasons in the USSR (Cont.)

36-62-6/6

the duration of regular seasons in the main temperature zones and the intensity of climatic changes. Atmospheric circulation is presented as an important factor in forming the seasohs. Included are maps showing the commencement of seasons in various parts of the USSR and tables giving the average daily temperatures at which summers and winters begin and end in the 9 climatic regions of Russia. The following authors are mentioned: Mulitanovskiy, B.P., and Shirkina, N.A. There are 10 charts, 4 tables and 12 USSR references.

ABSTRACT:

On May 29, 1959, a meeting of the Uchenyy sovet (Scientific Council) took place at the Glavnaya geofizicheskaya observatoriya (Geophysical Main Observatory). It was held in commemoration of the 100th anniversary of Alexander von Humboldt's death. The members of the Observatory mentioned, and of other institutes of Leningrad, were present. Reports were held by Academician A. A. Grigor'yev on "The Scientific Importance of A. Humboldt's Work", and by Professor Ye. A. Rubinshteyn "In Commemoration of Alexander Humboldt". Professor M. I. Budyko, Chairman of the Scientific Council, made the closing speech, pointing to the fact that Humboldt had contributed to the organization of the Geophysical Main Observatory.

AUTHOR: Lebedev, A.N. (Candidate of geographical sciences) TITLE: Some characteristics of the distribution of the cloud cover on days with and without

SOURCE: Leningrad. Glavnaya geofizicheskaya observatoriya. Trudy, no. 163, 1964. precipitation

Voprosy klimatografii (Problems in climatography), 56-75 TOPIC TAGS: climatology, precipitation, cloud cover, fog, low cloud, cyclone, frontal

ABSTRACT: Observational data for the period 1935 - 1955 (4 times each day) have been used to compute the mean characteristics of the cloud cover on days with and without preused to compute the mean characteristics of the croud cover on days with and without period cipitation in the layers 0-50, 50-100, 100-200, 200-300, 300-600, 600-1, 000, 1,000fog 21,500, 1,500-2,500 and > 2,500 m and the probability of these gradations. It was found that the geographical and seasonal distribution of these data differ appreciably on days with and without precipitation. The average cloud cover when the lower cloud boundary is 100-1, 000 m in spring and autumn and 300-600 m in summer on days with precipitation is usually appreciably greater than on days without precipitation. In individual months in Bome regions, the average cloud cover is 1.5-2.0 times greater than the average cloud Card 1/4 3.

CIA-RDP86-00513R000929010012-7" APPROVED FOR RELEASE: 08/31/2001

ACCESSION NR: AT5002953

cover for rainless days. It is characteristic that clouds above 1,500 m are largely observed only on days without precipitation. Gradations of heights of the lower cloud boundary of 0-50 and 50-100 m are observed on both rainy and rainless days. However, they are observed most frequently on those days when there is no precipitation. The high probability of low clouds at heights of 50 and 100 m on days without precipitation can apparently be attributed to the presence of uplifted fogs. This is confirmed by the fact that clouds in the 50- and 100- m gradations are observed in large part in the nighttime and morning hours. For this reason, low clouds in the warm season of the year are an indication of rainless weather in more cases than a forerunner of precipitation. Only in rare cases in the spring and autumn, during periods of maximum cyclonic activity. is a cloud height up to 50 m associated with clouds of overcast rainy weather (frontal fogs). In fact, in summer, clouds with heights of 50-100 m are not observed on days with precipitation. Fig. 1 of the Enclosure is an example of diagrams constructed for five stations which make possible the generalizations and areal preculiarities presented by the author. The raw data used in the study are presented in a 13-page table. Orig. art. has: 5 figures and 1 table.

TITLE: Phase stability of a system of particles in accelerators AUTHORS: with automatic control SOURCE: Atomnaya energiya, v. 18, no. 1, 1965, 22-28 TOPIC TAGS: particle accelerator, accelerator stability, accelerator control, phase stability, kinetic equation ABSTRACT: The article analyzes the phase stability of a system of particles in a cyclic accelerator, in which the accelerating-field frequency is automatically corrected against the beam deviation. Since such a problem must be solved for a system having a practically infinite number of degrees of freedom, corresponding to a large number of accelerated particles, the authors show that such an investigation can be carried out by the method of kinetic equations with 1/2 Card

L 26917-65

ACCESSION NR: AP5004000

self-consistent interaction. This yields a general characteristic equation, suitable for a wide class of control systems. The analysis is limited to some general properties of these equations, independent of the choice of the parameters of the feedback circuit, and conditions are derived under which the scatter of the particles relative to the synchrotron oscillations exerts a stabilizing action on a bunch of particles traveling through the accelerator. Some general stability criteria are derived, and it is noted in the conclusion that the resultant characteristic equation can be extended to more complicated systems, which the authors propose to treat in a separate article. Technical Measures Introduced into Production at Plants in the TITLE:

Bearing Industry (Tekhnicheskiye meropriyatiya, vnedrennyye v

proizvodstvo na zavodakh podshipnikovov promvshlennostii

PERIODICAL: V sb.: Materialy Soveshchaniva glavn. metallurgov z-dov i in-tov

avtomob. prom-sti. Nr 4. Moscow, 1958, pp 91-95

ABSTRACT: Technical measures carried out by plants in the bearing industry in

1956 (sizing of bearing-ring forgings, cross rolling of balls on the Tselikov mill, the saddening of forgings to shape, introduction of induction heating, etc.) made possible an increase in productivity,

saving of metal, and improvement in working conditions.

Abstract

: No signs of poisoning were observed as sheep (cf the Dzhaydara breed) were fed seeds of the silver-gray trichodesma in dosages of 0.05-0.2 g/kg daily for a period of 1-11/2 months and ewes received 0.1-0.4 g/kg dosages of it for 18-42 days However, after 15-20 days daily 1 and 2 g/kg dosages caused already poisoning which was followed by death of the sheep on the 22nd-42nd day. Autopsy revealed gastroenteritis, encephalitis, dystrophy of the liver, and pulmonary edema.

Title

: Multiple Diverticules of the Small Intestine.

Orig Fub : Khirurgiye, 1957, No 3, 36-42

Abstract: Six cases of multiple (2-11) diverticules of the small intestine are described. The diagnosis was made in the case

of one patient during an operation, in five other patients it was made following an X-ray exploration of the intestinal tract. Diverticules cause severe complications and sequela (diverticulitia, peridiverticulitia, perforation, peritonitia,

obstruction of the intestines, symphysis, ileu:). This inflemmation may spread to the adjoining actions of the in-

tostine and to the adjecent organs.
